

Advanced Business Application Programming (ABAP)

Advanced Business Application Programming (ABAP), is SAP's fourth generation language. All of R/3's applications and even parts of its basic system are developed in ABAP. ABAP is used for customization and modification of SAP applications.

Who should attend the course

- Basis Specialist
- Developers
- Programmers

Prerequisites

- Computer knowledge
- Recent programming experience (within last 5 years) in a 3GL structured programming language or strong technical background with SAP functional experience
- Experience with common programming constructs, algorithms and computing science concepts (e.g. variables, arrays, loops, branches, record structures, File I/O, relational database design)
- Technical Degree or Diploma (Computer Science or Electrical Engineering preferred)
- Solid working knowledge of Windows 95/98/NT
- Previous software development experience in the design and implementation of GUIs in the Microsoft Windows environment preferred (e.g. Visual Basic, Microsoft Access, Delphi, etc.)
- Database background (SQL, PL/SQL, Open SQL) or any other embedded SQL related hybrid
