

Warehouse Management (WM)

WM can either be Centralized, Decentralized or Lean WM, as identified by business needs. Warehouse Management goes beyond the stock-storage-location to the exact location at the bin level. Yard Management, Task and Resource Management, SAP Console and others, are WM process components. Tight integration of WM and ERP improves the visibility and accuracy of data across an enterprise, enabling businesses to provide SCM excellence and insure well executed and more accurate stock data.

LearnSAP Canada's WM course highlights include:

- WM Overview
- WM Structure, Functionality and Process Flow
- Master Data
- Replenishment

Who should attend the course
